- Rail transport operator: Slovenian Railways - Freight transport
- Ministry of Infrastructure: Slovenian Infrastructure Agency
- Local Chamber of Craft and Small Business Grosuplje

- Project partner: Prometni institut Ljubljana d.o.o. (Institute of Traffic and Transport)
- External provider of REIF pilot: SŽ-Projektivno podjetje Ljubljana d.d.

Meeting notes and key findings

At the beginning of the meeting Mr. Blaz Jemensek, project manager at Prometni institut Ljubljana, presented REIF project and studies that were made within the project and were a basis for the pilot in Central Slovenia Region (baseline studies, market potential studies, studies on bottlenecks).

After project presentation the pilot project was presented by Prometni institut Ljubljana, including preparation/design of rail siding documentation for constructing of track, missing link between private area (car logistics centre) and public part of rail infrastructure. The pilot was further presented in more details also by external provider of REIF pilot: SŽ-Projektivno podjetje Ljubljana.

Further there was a discussion on future rail infrastructure & services. Key findings and proposals are below.

Key findings and proposals:

- The documentation is right step forward and it is necessary to find funds also for construction of siding
- It should be taken in to account also public financing (national, local, EU funds) for such rail investments - the benefits are also on national level (environmental benefits)
- Rail sidings are also important in other places in regions, and it should be promoted by the Ministry
- Beside the rail infrastructure there is a lot of room for improving the services (optimization of transport, better quality of rolling stocks, etc)
