Tool to assess public investments to support industry low carbon transition

Pavel Ruzicka, ENVIROS, Czech Republic

- IT instrument - MS Excel based calculator

Two levels / two tools

Programme level tool

- Tool can be used for ex-ante assessment of a planned financial programme
- It calculates potential energy and environmental benefits as well as financial indicators

Project level tool

- Tool can be used for evaluation of energy and environmental benefits of particular projects
- It allows to compare different financing options and provides calculation of economic results

Inputs	Outputs
<ul style="list-style-type: none">• Expected budget (allocation) of the programme• Types of saving measures• Allocation per type of measure• Sectors addressed• Type and rate of co-financing	<ul style="list-style-type: none">• Expected use of allocation• Expected investment cost• Expected energy savings• Expected decrease of emissions
Inside variables	<ul style="list-style-type: none">• Types of saving measures<ul style="list-style-type: none">- Investment per GJ saved- Measure lifetime- Saving potential (on GJ) - per sector• Energy mix / emission factors

TYPES OF MEASURES

1. Installation of solar-thermal systems (for heat production)
2. Installation of photovoltaic systems (for electricity production)
3. Installation of frequency invertors
4. Installation of flue gas pre-heaters to boilers
5. Installation of cogeneration units
6. Installation/replacement of compressors
7. Installation of heat pumps in industry

8. Change of technological processes
9. Energy management
10. Control of circulation pumps

11. Replacement of coal boilers with gas boilers
12. Replacement of coal boiler with biomass boiler
13. Replacement of coal boiler with new coal boiler
14. Transformers replacement
15. Replacement of existing lighting with LED80
16. Replacement of lighting LED80 with LED110

17. Reduction of losses in heat distribution
18. Thermal insulation of technologies
19. Waste heat utilisation
20. Building insulation

PROGRAMME LEVEL TOOL

Title of the new policy (programme)		START NEW
Tolerance	10%	
Expected allocation of the policy (programme)	€ 500 000,00	ADD MEASURE
Loan interest	1,00%	
Discount rate	5,00%	RELOAD GRAPH
Measure lifetime	20	
Saving Measure 2		
Waste heat utilisation		
Total saving potential of the measure	3 304 TJ	
Savings realised without any subsidies	1 817 TJ	
Share on the policy (programme allocation)	12%	
	€ 60 000	
Share of subsidy on the total investment costs	50%	
Share of loan on the total investment costs	30%	
Share of own resources on the total investment costs	20%	
Net Present Value	€ 35 886,26	
Expected allocation utilisation	€ 33 158	Allocation will be likely not exhausted
Investment costs at the expected utilisation of the allocation	€ 56 842	
Expected energy savings	570 TJ	
Expected drop of CO ₂ emissions	138 605 t	
Expected drop of CH ₄ emissions	1 481 kg	
Expected drop of N ₂ O emissions	1 944 kg	
Expected drop of CO ₂ eq emissions	139 221 t	
Expected Cash Flow	4 737 €/y	

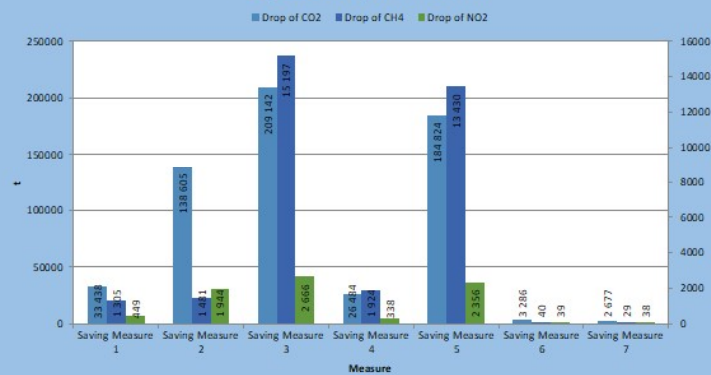

Total program output	
Expected energy savings	7 262 TJ
Expected drop of CO ₂ emissions	598 456 t
Expected drop of CH ₄ emissions	33 406 kg
Expected drop of N ₂ O emissions	7 828 kg
Expected drop of CO ₂ eq emissions	601 624 t
Allocation	
Allocation	€ 500 000,00
Expected allocation utilisation	€ 465 021
Total investment costs	€ 1 147 042
Price of the saved energy	
Price of saved energy	157,95 €/GJ
Price of saved CO ₂ emissions	1,92 €/t
Price of saved CH ₄ emissions	34,34 €/kg
Price of saved N ₂ O emissions	146,52 €/kg
Price of saved CO ₂ eq emissions	1,91 €/t

Expected Energy Savings

Expected drop of emissions

	Saving Measure 2	Total program output	%
Expected allocation utilisation	€ 33 158	€ 465 021	7%
Total investment costs	€ 56 842	€ 1 147 042	5%
Expected energy savings	570 TJ	7 262 TJ	8%
Expected drop of CO ₂ eq emissions	139 221 t	601 624 t	23%
Expected Cash Flow	4 737 €/y	136 404	3%

Programme-related inputs

Measure-related inputs

Measure-related outputs

Inputs	Outputs
<ul style="list-style-type: none">• Amount of investment• Lifetime of measure• Financial sources (grant, loan, own resources)• Interest rate• Period of repayment• Discount rate• Expected energy savings• Energy prices	<ul style="list-style-type: none">• Expected decrease of emissions• Development of cash flow• NPV - Net present value• Payback period • Alternative ratio of a subsidy

Inside variables • Energy mix / emission factors

PROJECT LEVEL TOOL

EN

Company name:		Set of measures:	
Project name:		Description:	- building envelop and roof insulation - replacement of doors/windows - modernization of technology (electric resistance furnace)
Project ID:	7		
Date:			

INPUT

Investment	Total	€	71 743,00
	Loan		48%
	Own Resource		0%
	Subsidy		52%
Loan	Interest rate		1,00%
	Repay		10 years
Own Resource Measure	Discount rate		4,00%
	Lifetime/expected payback period		25 years

Expected energy savings & cost of energy

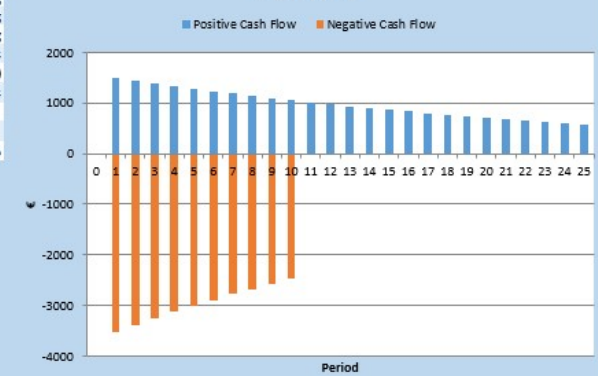

INPUT

Electricity	2,80 MW/h	166,270 €/MW/h
Natural Gas	24,09 MW/h	45,100 €/MW/h
Coal	0,00 kW/h	0,000 €/kW/h
Heat	0,00 kW/h	0,000 €/kW/h
Solid biofuels	0,00 kW/h	0,000 €/kW/h
Gaseous biofuels	0,00 kW/h	0,000 €/kW/h
Other fuels	0,00 kW/h	0,000 €/kW/h
Total	26,89 MW/h	57,717 €/MW/h

OUTPUT

Expected drop of CO2 emissions	7 258,783 kg
Expected drop of CH4 emissions	112,926 g
Expected drop of N2O emissions	43,065 g
Expected drop of CO2eq emissions	7 274,440 kg
Expected Cash Flow	1 552 €/years
Net Present Value	€ (5 349,08)
Simple payback :	46 years
Equivalent scenario without loan investment	
Own resources investment	€ 29 594,79
Subsidy share:	59%

Cash Flow

Cumulative Discounted Cash Flow

Cumulative Discounted Cash Flow of Own resource and Subsidy share without Loan equivalent to the current investment share

Thank you for your attention
