

HoCare2.0 Pilot

SCN4ALL

SCN4ALL analyses the physiological functions of cardiovascular and autonomic nervous systems, and has a wide range of applications in medicine. It is a telemedicine system that independently monitors over 30 physiological parameters by a simple and easily disinfected pulse oximeter, and sends the measured data to a processing unit in the cloud.

PARTICIPANTS

11 elderly people over 60 and their relatives.

A professional group of experts covering the Quadruple-helix.
The Polgárdi Home for the Elderly.

ACTIVITIES

- Mapping
- Diary study
- Idea generation workshops
- Interview
- Focus group meetings
- Sticky notes
- Mind map
- Diagrams

AND THE END?

The co-creation process contributed so much to the development of our product. Although it was demanding, it paid off in the long run.

I have enjoyed the whole process, the work and also the fact that finally someone was seriously interested in my opinion.

WHAT WE LEARNED

- The co-creation process has a real added value in product development.
- Taking end-user opinions into account helps to bring to the market a product that is based on real demand needs and perfectly matches the end-user's expectations in terms of functionality, comfort and design.
- After an initial reticence, it turned out that older people are great to work with and their age is not really a disadvantage in normal circumstances.
