

Invitation

INTERGREEN-NODES Final Conference

INTERMODAL GREEN ALLIANCE - FOSTERING NODES

Due to capacity bottlenecks caused by planning restrictions, terminals and ports are having difficulties managing the rapidly growing volume of freight traffic while still making transshipment and last-mile transport more environmentally friendly.

InterGreen-Nodes aims to develop environmentally friendly, intermodal last-mile freight transport in urban areas and networks its actors across regions from practice and politics. Through transnational cooperation and the exchange of new technological approaches, methods and strategies on political, spatial planning and technical levels, InterGreen-Nodes harmonises new planning approaches through highly innovative, tangible demonstrators.

The InterGreen-Nodes Consortium is pleased to announce the online Final Conference on

Thursday, 05 May 2022

10:00 - 13:00

Online Access Data:

<https://meet.goto.com/774390709>

You are welcome to participate in this three-hour event.

During the Final Conference, the project results successfully achieved together with the consortium will be presented. Furthermore, interesting guest lectures on the development of green and clean transshipment and transport options will be presented.
