## PA1. Testing 3DEMS in a dense urban area of Emilia Romagna region

### Introduction

The **BOOSTEE-CE** (*Boosting Energy Efficiency in Central European Cities through Smart Energy Management*) project will develop and implement technical solutions, strategies, management approaches & financing schemes to achieve higher Energy Efficiency (EE) in public buildings. This will be achieved through a transnational cooperation and using geospatial data, smart energy management tools and energy audit to facilitate the implementation of EE buildings. The final aim is to improve the governance of EE in existing public buildings (within Pilot Actions) and ultimately reduce energy consumption.

### Aims

The pilot action to improve energy efficiency is implemented in 4 buildings. Emilia Romagna region is the owner of the building and will retain ownership and management responsibilities after the project lifetime.

The following objectives have been agreed as part of the pilot:

- improvement of the energy efficiency of the selected buildings
- easier operation of the buildings
- promoting and disseminating knowledge about energy efficiency measures in buildings

### Solutions

The pilot action includes using 3D building models at “**3D Energy Management System (EMS)**” as a part of OnePlace platform, development of energy planning strategy in the region.

## PA idea (MONITOR -> CONTROL -> MANAGE -> SAVE)

The implementation of the energy consumption **monitoring and management** system contributes to a significant reduction in the value of energy bills. The data collected by the system, which constantly **controls** the level of energy consumption, allow to optimize the level of contracted capacity, which in turn generates **annual savings**. The system constantly monitors the level of energy consumption, provides information about where it is distributed, where it is lost. The tools provided by the system allow to easily analyze this data and draw conclusions about ways to reduce the costs associated with the use of energy. Energy **management** allows to optimize the contracted capacity, selection of a cost-effective tariff, energy monitoring and provides knowledge about energy flows in the building.

## PA indicators & results

- \_ activities period
- \_ people involved in PA implementation
- \_ tools / instruments used
- \_ trainings, meetings, seminars etc.
- change in people's behavior

## Added values for replication and dissemination

The activities can be transferable and replicated in other cases and regions. Information about the pilot action is promoted and disseminated in the region and beyond.
