Hungary: n=7
Benchmark: n=379 & Data weighting according to equal distribution across countries

BACKGROUND INFOS - HUNGARY

Most of the participants of Innoskart Digital Cluster are seated in the Central Transdanubian Region and in Budapest, due to this fact, the companies who had filled in the monitor also have their seat in these two areas.

Compared to the international situation, the Hungarian economy is rather small, so the firms who were taken into the analysis come from the more developed west part of the country.

It is typical for the Hungarian economy that the western part of the country - called Transdanubia - is more developed, you can find here more financially strong and innovative organizations who fit to the requirements of modern world's challenges in processing industry, agriculture or services.
