

TRAINING ON MANAGEMENT PLAN DEVELOPMENT IN PARMA MUNICIPALITY

Output factsheet: Trainings

Project index number and acronym	CE32 AMIIGA
Lead partner	Central Mining Institute
Output number and title	O.T.3.2 Training of practitioners
Responsible partner (PP name and number)	Landeshauptstadt Stuttgart PP3
Project website	http://interreg-central.eu/Content.Node/AMIIGA.html
Delivery date	08.2019

Summary description of the implemented training measure(s), explaining the specific goal(s) and target groups

The additional training on framework and background of the management plan was held on 23. May 2017 in Parma, Italy. Altogether five participants, representatives of Parma municipality, were trained. Effective training activities were conducted in order to provide the necessary understanding and information as well as to engage actively participants in the training. Firstly, a trainer demonstrated his expertise in management plan development and provided information about the work plan. Secondly, a representative of the Parma municipality reported about activities performed, followed by discussion about Parma case study and corresponding problem solving. The discussion allowed exchange of transnational experience and knowledge. The presented training supported our project partner to better understand the methodology and initially to establish the framework and background for a groundwater management plan. The specific goal of the training was to provide to participants the necessary knowledge and specific practical examples on development of the management plan for Parma. The participants were assisted in (i) defining their project scope and goals, (ii) delineating their functional urban area (FUA), (iii) defining target groups to be addressed and (iv) establishing and organizing their regional implementation group (RIG).

A local public authority, i.e. project partner PP 8 (Parma municipality) was targeted groups involved in the training, since it is responsible for the development and application of the management plan.

NUTS region(s) where training(s) have been conducted (relevant NUTS level)

ITH52, Parma

Expected impact and benefits of the trainings for the concerned territories and target groups

The training revealed that PP8 already performed several meetings with relevant institutions in order to verify the willingness of potential RIG-members to contribute to the project and particularly to the development and application of the management plan. All interested and relevant institutions were invited to the RIG-local workshop, where experiences gained from the training were further transferred. The questionnaire on local experiences and needs, which was sent to the participants in advance, enabled good preparation of all parties. The concept of the management plan for Parma was discussed. The training gave valuable information about the structure of the report, the criteria for delineation of FUA and definition of goals, which shall improve the efficiency of working process.

Sustainability of the training(s) and developed training material(s) and their transferability to other territories and stakeholders

This training methodology proved to be an adequate initial step to establish the framework and background for a groundwater management plan in the pilot Parma. The additional training was tailored according to the special needs of the pilot Parma and therefore enabled a special focus on the challenges and practical examples in Parma. In this way, the partner shall be able to successfully develop a framework and background of the management plan, based on the instructions gained at the training. A day after the training, a RIG-local workshop was held in Parma municipality, whereby the general concept was transferred to other stakeholders.

Lessons learned from the development and implementation of training measures and added value of transnational cooperation

Applied training measures were efficient and successful in reaching the set goals of this training. Combined measures of lecture style and interactive approach gave satisfactory results. The participants discussed Parma case study, jointly suggesting solutions and exchanging experiences. Therefore, the working process of PP 8 shall be improved in future.
