From the end of January 2019 to the end of April 2019, THINGS+ project partners published an open call for SMEs participation in the second cohort of the pilot action to test the Service Innovation Methodology developed within the THINGS+ project with the updated key tools portfolio. Each partner checked the applications received and selected the eligible SMEs.

Goal of the open call was to build up a group of around **60 SMEs from manufacturing different industries**, more or less equally distributed among CE countries, that will test and validate the SIM approach (upgraded version) from the end-user perspective.

The SMEs list of potential beneficiaries that will have the chance to take part into the local end users' workshops and to develop a pilot action with the support of the THINGS+ partners had been approved by the Project Management Board and submitted to Steering Committee, that confirmed the list.

The 86 SMEs selected for being part of the second cohort are listed in the tables below, divided per organization that collected the Expression of Interest.
