

WHAT DO WE DO?

Our aim is to support public sector and administration in Central Europe, to make them increase their energy efficiency in buildings and to make public buildings users familiar with the power management. We want to change the atomic vision of buildings (approach that concentrates upon the smallest details) into holistic approach by pointing out the importance of the building as one element consisting of functions, relations between physical space, technological equipment and user's needs.

YOU CAN REDUCE THE ENERGY COSTS FOR LIGHTING BY USING THE MAXIMUM CAPACITY OF THE DAILY LIGHT.

CHANGE YOUR OLD SPLASHING SYSTEM FOR A MODERN VERSION, WHICH USES HALF OF THE WATER FOR ONE SPLASHING. YOU CAN REDUCE WATER CONSUMPTION BY ITS EFFECTIVE USE.

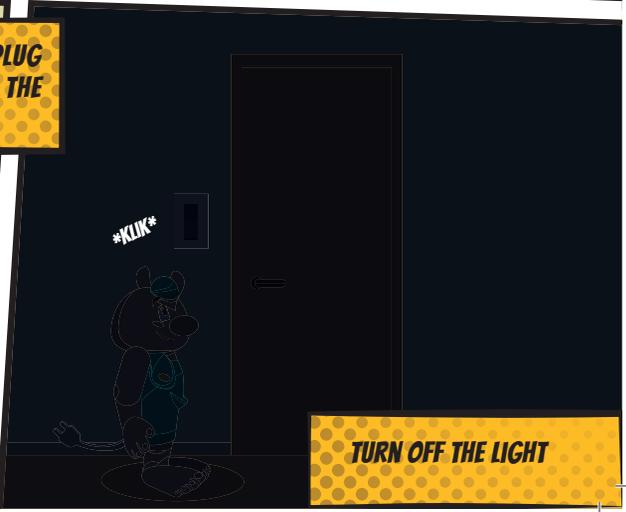

PREVENT THE RUNNING WATER LEAKS BY THE RIGHT AND PROPER CLOSURE OF DRAW-OFF TAP.

CLOSING DOORS AND WINDOWS MAKE YOU PROSPER FROM THE MAXIMUM POTENTIAL OF HEATING. IT IS ALSO IMPORTANT NOT TO COVER HEATING UNITS.

DO NOT FORGET TO TURN OFF AND UNPLUG THE ELECTRONIC DEVICES WHEN LEAVING THE WORKING PLACE. AND ...

TURN OFF THE LIGHT
